

How Important Is The Health Of The Tamar / Esk Rivers System To You?

Who monitors this system?

What processes are in place to improve river health?

What does “our” report card tell us?

www.clipart.com - 1058292

The Tamar Estuary and Esk Rivers (TEER) program was established in 2008 and represents a regional partnership between the agencies responsible for the management of the Tamar estuary and Esk rivers waterways.

The TEER Program aims to provide a coordinated approach to management and guide for solutions and investment to protect, maintain and enhance the Tamar Estuary and Esk Rivers systems from ‘catchment to coast’.

The 2016 report card uses an easy to understand grading system of ‘A’ through to ‘F’ for five zones within the estuary. The grades represent the overall health of the Tamar River estuary from 16 monitoring sites using data collected from December 2014 to November 2015, capturing all seasons.

It is important to monitor and understand the health of the Tamar River estuary so that natural resource managers can better evaluate the condition of our waterways and target investment and on-ground works to improve waterway health.

To explain more about the health and monitoring of our own river system, we are fortunate to have **Jesse Webster** from National Resource Management (NRM) North to address Tamar Valley U3A and to answer your questions.

Please find the time to attend and become more informed about our river system.

When: Thursday, 25th May, 10.30 am

Where: Beaconsfield Neighbourhood House, Grubb St, Beaconsfield

Presented by National Resource Management North in conjunction with Tamar Valley U3A.

Members and non-members welcome
